

UJWAL THAKARE

L1 SOC Analyst

+91 8080541439 | Nashik, Maharashtra, India | theujwalthakare@gmail.com | theujwalthakare.dev
github.com/theujwalthakare | linkedin.com/in/theujwalthakare/

PROFESSIONAL SUMMARY

Proactive Computer Science graduate and current MCA student specializing in cybersecurity and digital forensics. Equipped with hands-on experience building enterprise-grade homelabs to practice SIEM log analysis, Active Directory management, and incident triage. Passionate about threat intelligence and eager to leverage strong analytical skills in an L1 SOC Analyst role to monitor and defend against evolving cyber threats

TECHNICAL SKILLS

Cybersecurity	Threat Detection, Vulnerability Assessment, Incident Response Fundamentals, OWASP Top 10, Network Security, MITRE ATT&CK (Fundamentals), SIEM, IDS, XDR, EDR
Operating Systems & Infrastructure	Linux, Kali Linux, Windows, Docker, Kubernetes, VMware Workstation
Networking	TCP/IP, DNS, HTTP/HTTPS, SSH, VPN, Routing & Switching Fundamentals, Pfsense
Programming & Tools	Python, JAVA, C, Git, GitHub, Wireshark, Nmap, Burp Suite, Metasploit, SPLUNK

INTERNSHIP

IT Support / Network Administration

Aquil Tech Labs

May 2026 – Jul 2026

- Analyzed web application architectures (React.js, JavaScript, REST APIs) to understand data flows and identify potential attack vectors mapped to the OWASP Top 10.
- Monitored system environments and navigated modern development workflows (Git), gaining visibility into enterprise network topologies and log generation.
- Built a foundational understanding of the cybersecurity threat landscape, studying MITRE ATT&CK techniques (e.g., lateral movement, C2) and regional compliance standards like CERT-In guidelines.
- Engineered a Kubernetes-based Digital Immune System (DIS) research project, focusing on resilient infrastructure, system hardening, and automated threat detection mechanisms.

PROJECTS

Cognitive Overlay Digital Immune System (DIS) for Kubernetes Security

[GitHub/DIS](#)

Python, Kubernetes, Docker, Scikit-Learn, Linux

- Co-authored a Kubernetes-based Digital Immune System to detect runtime anomalies in containerized workloads using machine learning.
- Built telemetry collection agents to monitor CPU, memory, disk I/O, network throughput, and pod activity across Kubernetes nodes.
- Developed an anomaly detection pipeline using Isolation Forest and Autoencoder models, evaluating performance on a 100,000-sample runtime telemetry dataset.
- Automated Kubernetes-native response actions including pod isolation and container restart based on detected anomalous behavior, achieving an average inference latency below 30 ms.

Cybersecurity Home Lab

[GitHub/HomeLab](#)

Ubuntu, Kali Linux, Windows, VMware, Docker, Wireshark, Nmap

- Built a virtual cybersecurity lab using Ubuntu, Kali Linux, Windows, and VMware.
- Performed reconnaissance, vulnerability assessment, and service enumeration using Nmap.
- Analyzed TCP/IP, DNS, HTTP/HTTPS, and SSH traffic using Wireshark.
- Practiced Linux administration, Docker deployment, SSH, and firewall configuration.

EDUCATION

Master of Computer Applications

MET Bhujbal Institute of Engineering (SPPU), Nashik

SGPA: 8.82/10

Aug 2025–Present

Bachelor of Science in Computer Science

Savitribai Phule Pune University

CGPA: 7.93/10

Jun 2022–Jul 2025
